

David Oteros

AI/ML, BLOCKCHAIN, AND FULL-STACK ENGINEER

Software engineer with strong cross-domain delivery across AI/ML, blockchain, and modern web applications. Brings 3 years of hands-on AI/ML product work, 5 years of blockchain engineering across EVM, Solana, and Bittensor, and deep full-stack experience building production interfaces and application flows with Next.js and Tailwind CSS.

PROFESSIONAL HIGHLIGHTS

- Built AI-powered product features, LLM workflows, automation services, and model-integrated applications over the last 3 years.
- Delivered blockchain systems across EVM, Solana, and Bittensor, including contracts, dApps, integration layers, and decentralized infrastructure.
- Specialized in full-stack product delivery with Next.js and Tailwind CSS, combining frontend quality with backend integration and production execution.

PROFESSIONAL EXPERIENCE

AI/ML Engineer

2022 - Present

Independent / Contract

- Built AI-powered product features around LLM workflows, content generation, automation, and assistant-style interactions.
- Integrated model APIs into production web applications with backend orchestration, response handling, and workflow logic.
- Delivered practical AI systems focused on product usefulness, reliability, and integration quality rather than isolated experimentation.

Blockchain Engineer

2019 - Present

EVM, Solana, and Bittensor Ecosystems

- Developed blockchain-backed products across EVM networks using Solidity, wallet integrations, token logic, and dApp interaction flows.
- Worked on Solana-oriented product development and blockchain integration patterns for decentralized applications.
- Built and operated Bittensor-related AI miner and decentralized infrastructure workflows, connecting blockchain operations with AI systems.

Full-Stack Web Developer

2018 - Present

Next.js / Tailwind CSS Specialist

- Built production web applications with Next.js, Tailwind CSS, TypeScript, and API-connected backend services.
- Delivered responsive user interfaces, dashboards, landing pages, and product flows with strong attention to performance and design quality.
- Regularly handled full-stack feature delivery from frontend implementation through backend integration and release.

Web3 / dApp Product Engineer

2020 - Present

Independent Product Delivery

- Connected smart contracts and blockchain backends to usable web products with wallet UX, transaction flows, and on-chain application behavior.
- Bridged frontend product work and blockchain logic so decentralized systems were deliverable as complete user-facing applications.

Frontend and Product UI Engineer

2018 - Present

Client and Contract Projects

- Implemented clean, high-speed interfaces with Tailwind-based systems, component reuse, and responsive behavior across devices.
- Translated product and design requirements into polished production UI with practical engineering constraints in mind.

RECENT PROJECTS

2023 - PRESENT · APPLIED AI

LLM Product and Automation Workflows

Built AI-driven application features for assistants, content generation, automation, and backend orchestration integrated into real web products.

2018 - PRESENT · FULL-STACK WEB

Next.js and Tailwind Product Builds

Built responsive, production-grade web apps, dashboards, landing pages, and user workflows with a strong focus on Next.js architecture and Tailwind-driven UI systems.

2019 - PRESENT · BLOCKCHAIN

EVM, Solana, and Bittensor Systems

Delivered blockchain applications spanning smart contracts, dApp integration, Web3 product flows, and Bittensor-related decentralized AI infrastructure.

CROSS-DOMAIN DELIVERY

Integrated AI, Web3, and Product UX

Combined AI features, blockchain infrastructure, and full-stack product engineering into end-to-end software delivery for modern web applications.

CORE SKILLS

Python

LLM Workflows

AI Integrations

Prompt Engineering

FastAPI

Node.js

LLM Applications

Solidity

Rust

web3.js

Next.js

Tailwind CSS

TypeScript

PostgreSQL

REST APIs

Full-Stack Delivery

SELECTED IMPACT

- 3 years of applied AI/ML product work focused on usable integrations and workflow automation.
- 5 years of blockchain delivery across EVM, Solana, and Bittensor-related engineering work.
- Strong specialization in Next.js and Tailwind-based full-stack product implementation.

EDUCATION

M.S. in Computer Science University of Illinois Urbana-Champaign	2015 - 2017
B.S. in Statistics University of Washington	2011 - 2015

CERTIFICATIONS

- AWS Certified Machine Learning - Specialty
- TensorFlow Developer Certificate
- Professional Scrum Product Owner I

LEADERSHIP

- Translate technical requirements across AI, blockchain, and frontend systems into shippable product work.
- Bridge backend logic, Web3 integrations, and polished UI delivery within the same engineering workflow.
- Approach projects as a product-focused software engineer, not only as a specialist in one technical layer.
